SUMMARY

Junior AI Engineer with expertise in building **LLM-powered applications**, **Generative AI** systems, and high-performance backend services using **FastAPI**. Experienced in developing and deploying **4+ production-grade AI solutions** leveraging **OpenAI, Anthropic, Groq, and Ollama**, including conversational AI, **RAG-based chatbots**, natural language query engines, and automated report generation systems. Strong background in API development, database design, prompt engineering, and scalable backend architecture.

WORK EXPERIENCE

Evolvision Technologies

Apr 2025 - Present

- Developed **4 Generative AI and LLM-powered applications** using FastAPI, OpenAI, Groq, and Ollama.
 - Built scalable backend services, **REST APIs**, and AI automation solutions for enterprise clients.
 - Worked on **RAG systems**, conversational AI, report generation, and intelligent document processing platforms.
-

PROJECTS

Enterprise RAG Knowledge Assistant

- Developed a **RAG chatbot** using GPT-4o-mini, OpenAI Embeddings, ChromaDB, and FastAPI for enterprise knowledge retrieval.
- Implemented **document chunking, embedding generation, semantic search, and retrieval pipelines** for context-aware responses.
- Developed backend APIs for conversational AI workflows and real-time question answering.

AI-Powered Kidney Health Report Generation System

- Developed an AI-powered medical report generation platform using **GPT-4o-mini**, reducing report generation time by **90%+** (from approximately **20–30 minutes to 2–3 minutes** per patient).
- Designed and developed the complete backend architecture using **FastAPI and MySQL**, including **4–5 REST APIs**, authentication, report management, and workflow automation.
- Integrated **PDF generation** and **Sarvam AI translation services** to generate multilingual healthcare reports.

Natural Language-to-SQL Query Engine

- Developed a **Natural Language-to-SQL system** using LLMs via OpenRouter, enabling users to query data across **4 database tables** through conversational prompts.
- Designed **schema-aware SQL generation**, query execution, and structured response pipelines using FastAPI and SQL databases.
- Enabled non-technical users to perform real-time data exploration without writing SQL queries.

Digital Marketing Campaign Conversion Prediction System

- Built a machine learning classification system using **1,000+ customer engagement records** to predict conversion likelihood.
 - Trained and evaluated **4 machine learning models**, including Logistic Regression, Decision Tree, Random Forest, and XGBoost.
 - Deployed the best-performing **XGBoost model (98% accuracy)** through FastAPI and developed a Streamlit dashboard for real-time predictions.
-

TECHNICAL SKILLS

- **Backend Development:** Python, FastAPI, REST APIs, Asynchronous Programming, Authentication & Authorization, API Integration
 - **Generative AI & LLMs:** OpenAI (GPT-4o-mini), Anthropic (Claude), Groq, Ollama, OpenRouter, Prompt Engineering, RAG, OpenAI Embeddings
 - **AI & Machine Learning:** Machine Learning, NLP, OCR, Classification Models, Feature Engineering, Model Evaluation
 - **Databases:** MySQL, PostgreSQL, ChromaDB
 - **Speech AI:** Deepgram (STT & TTS), Sarvam AI
 - **Developer & AI Tools:** Cursor, Windsurf, Claude Code, AntiGravity AI
 - **Version Control:** Git, GitHub
-

EDUCATION

Master Diploma in Data Science & AI	June 2024 - Dec 2024
• <i>Boston Institute of Analytics</i>	
Bachelor of Computer Applications (BCA)	Sep 2021 - Apr 2024
• <i>Maharaja KrishnakumarSinhji Bhavnagar University</i>
